Appendix C.....RPC Disclaimer

This document, and the information contained herein, is prepared for the purpose of identifying, evaluating, and planning safety improvements on public roads, which may be implemented utilizing federal aid highway funds. This information shall not be subject to discovery or admitted into evidence in a Federal or State court pursuant to 23 U.S.C. 407.

1. Introduction

1.1 Scope of Work

The New Orleans Regional Planning Commission (RPC) is conducting a Stage 0 Feasibility Study to analyze potential improvements to the surface transportation network in St. Bernard Parish relating primarily to the implementation of the proposed Louisiana International Terminal (LIT) project in Violet, Louisiana.

AECOM Technical Services, Inc. (AECOM), as part of the GIS Team, is evaluating the existing crash data within the overall project area.

1.2 Methodology

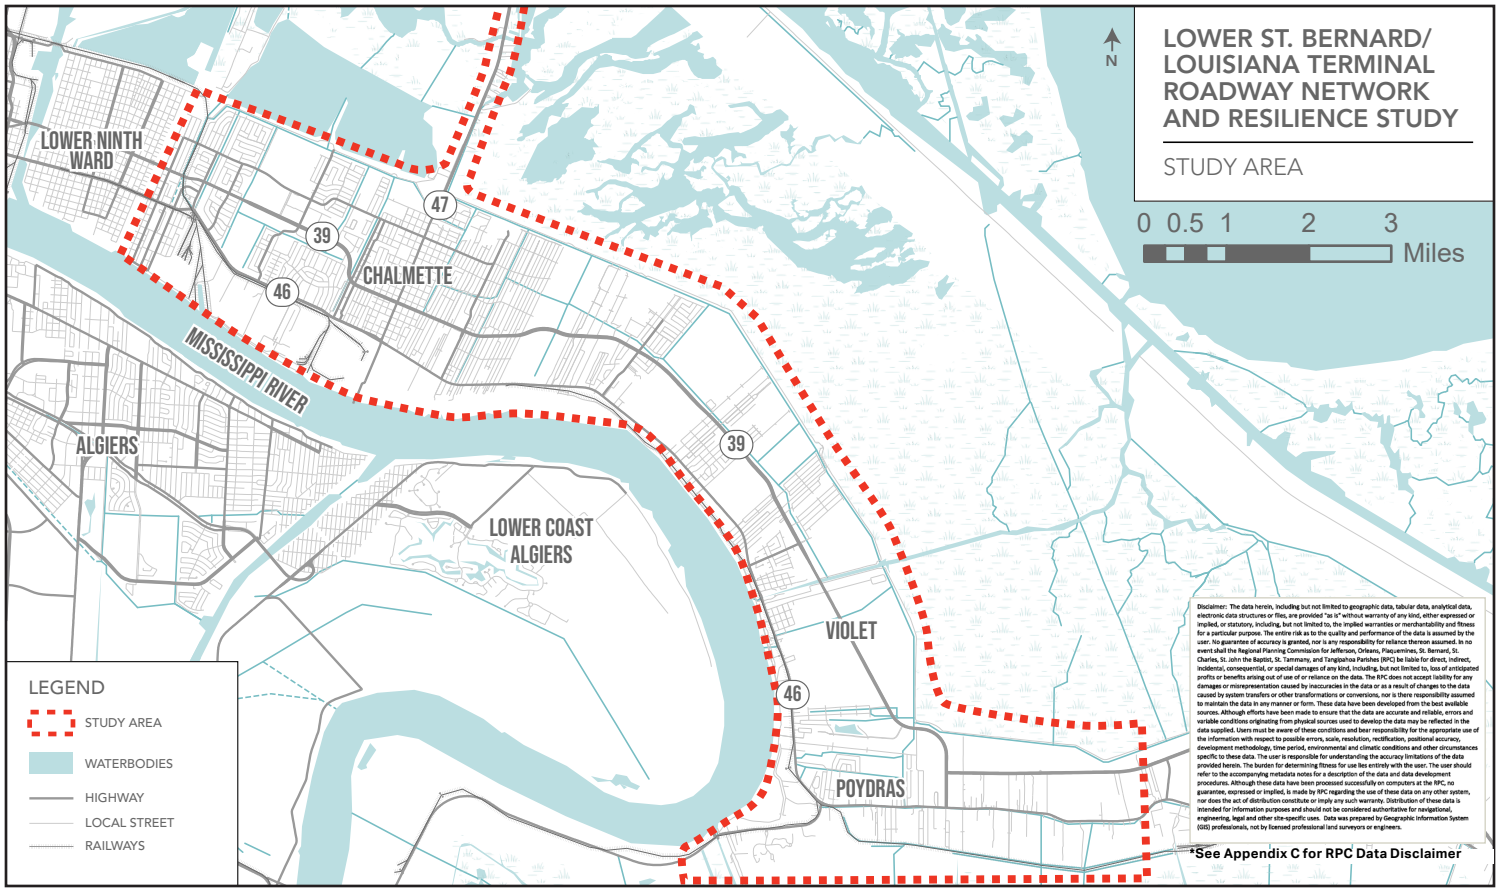

As part of the crash analysis, AECOM reviewed 5 years of crashes of all severity from the Louisiana Center for Analytics and Research in Transportation Safety (CARTS) using the new CATSCAN data for years 2017-2021, the years data was available at the time of the study. This data was mapped by latitude and longitude using Geographic Information Systems software to help illuminate findings.

Details of the data investigate a range of conditions and crash types experienced in the study area as part of existing conditions, including Manner of Collision, the time of day most crashes occur, locations experiencing multiple crashes, the number of fatalities, and the number of vulnerable users (pedestrian and bicyclists) involved in fatalities. Together this information is used to document crash trends and inform our understanding of the area and appropriate treatments as part of potential alternatives.

1.3 Study Area Boundaries and Major Corridors in the Study Area

The initial Stage 0 study area boundaries are irregularly shaped. It includes the 40 Arpent Canal on the north running southeast to a point below Violet, LA, and encompassing lower St. Bernard Parish, to join the east bank of the Mississippi River on the south, to the Orleans/St. Bernard line on the west. The major corridors evaluated within the study area include Judge Perez Drive (LA 39), Paris Road (LA 47), and St. Bernard Highway (LA 46). **Figure 1** shows the map of the study area.

Figure 1: Study Area

Prepared for: **New Orleans Regional Planning Commission**

This document, and the information contained herein, is prepared for the purpose of identifying, evaluating, and planning safety improvements on public roads, which may be implemented utilizing federal aid highway funds. This information shall not be subject to discovery or admitted into evidence in a Federal or State court pursuant to 23 U.S.C. 407.

2. Existing Crash Analysis

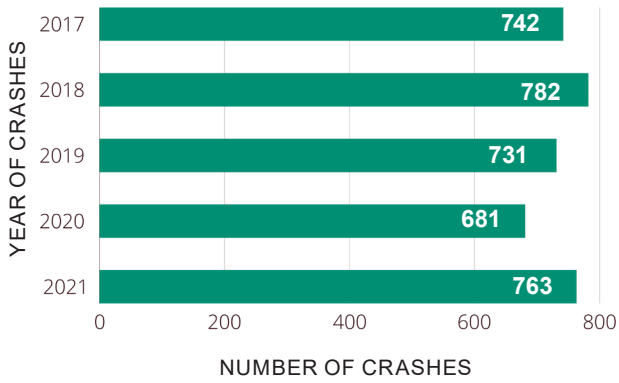

2.1 Crash Data Overview

A general overview of the crash data along the corridors of E. Judge Perez Drive (LA 39), the North by Paris Road (LA 47), and E. St. Bernard Highway (LA 46) indicate most of the crashes are occurring at the major signalized intersections. High crash volumes are expected along major signalized intersections on main corridors. A total of 16 crashes were noted to be fatalities within the limits of the study area. **Figure 2** below shows the locations of crashes and fatalities.

2.2 Crashes by Year

The crashes reviewed were from a 5-year period, starting from 2017 through 2021. The crash rate per year within this 5-year period is approximately 740 crashes per year for a total of 3,699 crashes over the 5-year period. The exception is within year 2020, when the crashes dropped to 681 crashes. This reduction of crashes is likely a correlation to the influence of COVID pandemic. National and local governments asked all non-essential workers to stay home. These directives influenced the driver behavior and ultimately reduced overall traffic. **Figure 3** shows crashes by year.

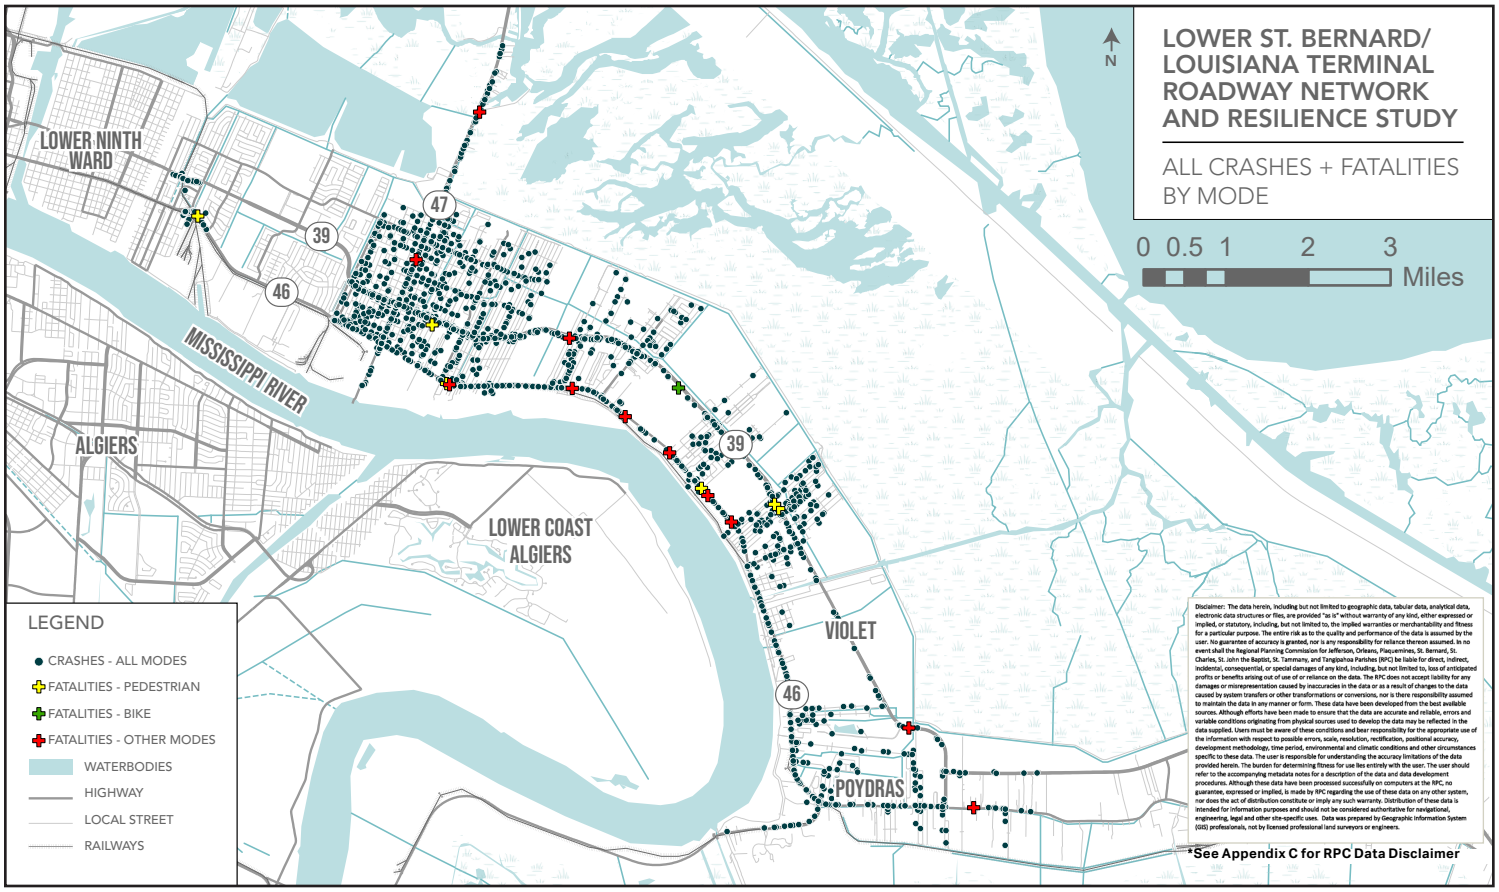

Figure 3: Crashes by Year

2.3 Manner of Collision

The Manner of Collision is a measure of crashes that are occurring and commonly used to help identify trends. These trends can help identify abnormalities within traffic patterns

Figure 2: Location of Crashes and Fatalities *Source: LADOTD Crash Data 2017-2021*

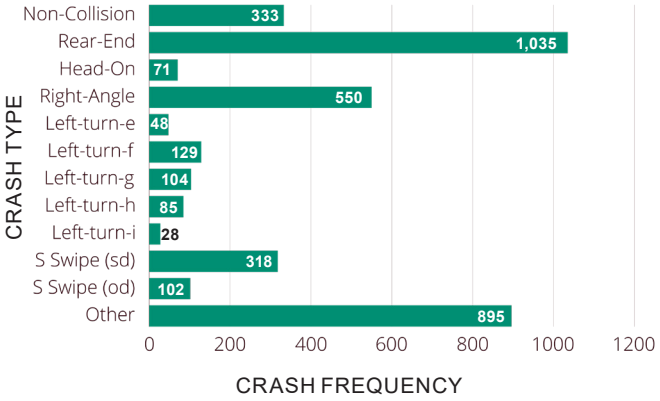

This document, and the information contained herein, is prepared for the purpose of identifying, evaluating, and planning safety improvements on public roads, which may be implemented utilizing federal aid highway funds. This information shall not be subject to discovery or admitted into evidence in a Federal or State court pursuant to 23 U.S.C. 407.

and help to find solutions to reduce crashes.

Shown below in **Figure 4**, the study corridor indicated the highest number of crashes were Rear-End crashes. The category "Other" was the second highest type of crash. Right-Angle crashes scored the third most frequently. Rear-end crashes typically occur at intersections within an urban area and typically indicate overcapacity within either the intersection or roadway segment.

Figure 4: Manner of Collision

"Other" types of crashes can range from lane departure, pedestrian incidents, crashes involving animals, railroad incidents, and such. A further in-depth review of the "Other" crashes will be required to determine what is the leading cause of these crashes and where the occurrence is located.

The Right-Angle crash occurs at intersections when vehicles arrive on perpendicular roads and collide. There are two types of right angle crashes; failure to yield after stopping and angle collision. A failure to yield occurs at stop signs, traffic signals, or before exiting a driveway. A right angle collision occurs when the front of one vehicle strikes the side of the other vehicle. A review of the intersection layout and timings would help indicate the cause of these crashes.

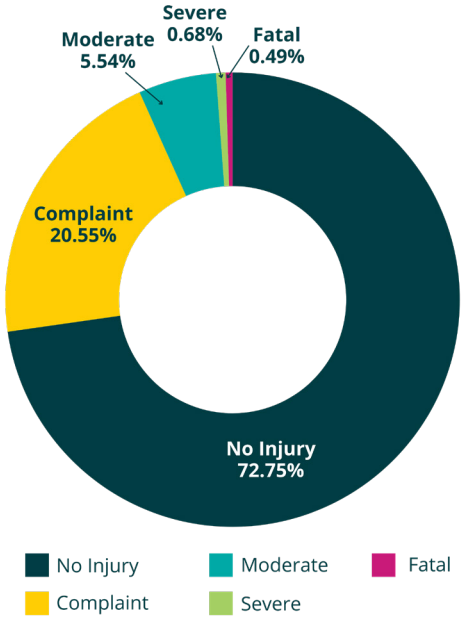

2.4 Crashes by Severity

Crash severity classification can be used to help form alternative solutions to improve safety. Classifications used to evaluate the crash severity are as follows; Non-Injury, Compliant, moderate injury, severe injury, and fatal. These classifications range from no known injuries (Non-Injury Crashes) to Fatal Crashes (resulting in death).

Fatal crashes are the leading reason to perform crash analyses. Within the study area there are 18 fatalities within the corridor. Of the 18 fatalities, 9 are located on E St. Bernard Highway between Paris Road and Violet Canal, and 5 are on E. Judge Perez Drive between Paris Road and Violet Canal. Two fatalities occurred on Parish Road, one on Lyndell Road and one on Bayou Road. Of these 18 fatalities, 11 were roadway departures and 7 were pedestrian related, Four were from crashes with fixed objects and 5 were on non-dry surfaces.

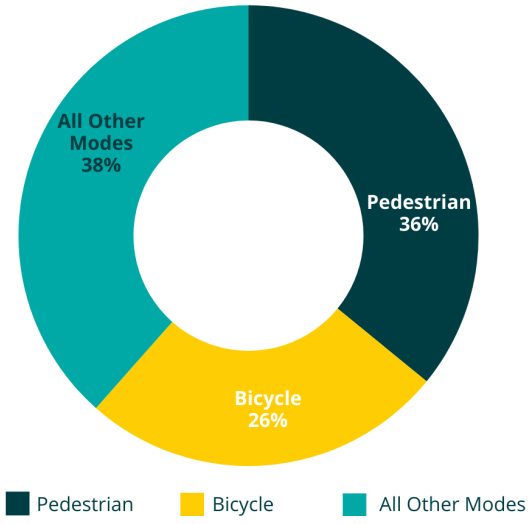

Figure 5 shows that over 70% of the overall crashes are Non-Injury crashes. The Non-Injury crashes can be an indication of several factors; including but not limited to Traffic volume, geometric design issues, driver behavior, site and road conditions. Although non-injury crashes do not cause physical harm, they still impact safety, insurance claims, and traffic flow.

Figure 5: Crashes by Injury Severity

While bicycle and pedestrian crashes account for a small number of overall crashes (3%), the percentage of severe injuries and fatalities involving cyclists and pedestrians is disproportionately higher (62%). **Figure 6** shows pedestrian, bicycle, and all other modes by severe crashes and fatalities.

Figure 6: Severe and Fatal Crashes for Pedestrians, Bicycles, and All Other Modes

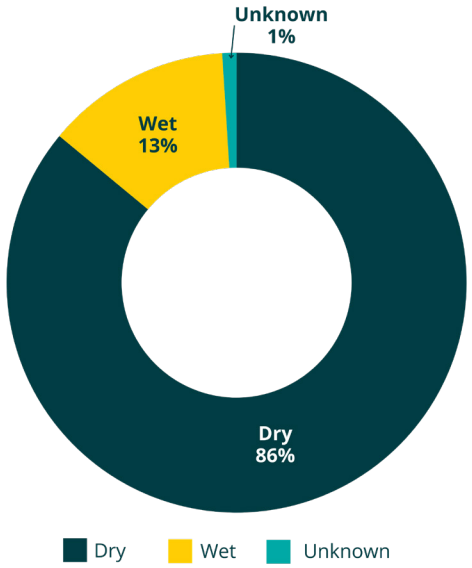

This document, and the information contained herein, is prepared for the purpose of identifying, evaluating, and planning safety improvements on public roads, which may be implemented utilizing federal aid highway funds. This information shall not be subject to discovery or admitted into evidence in a Federal or State court pursuant to 23 U.S.C. 407.

2.5 Surface Conditions

Surface condition can be a contributing factor of the overall crashes. Over 86 percent of crashes occurred on dry surfaces. **Figure 7** indicates the surface conditions for the crashes.

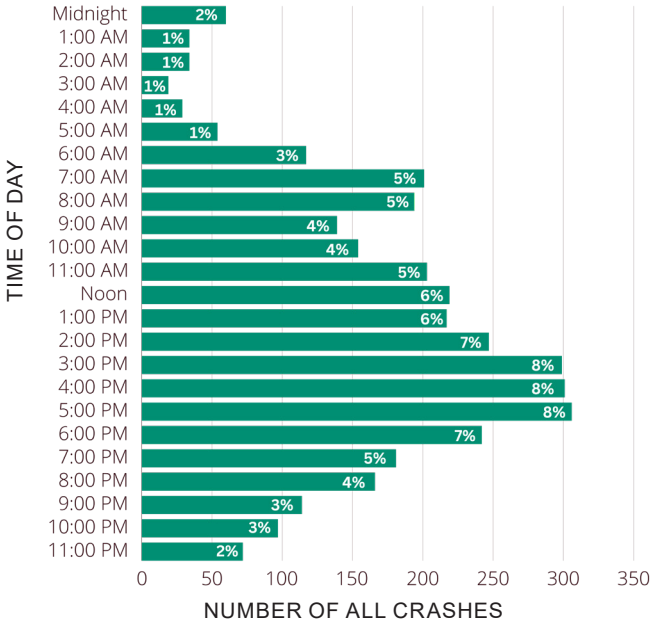

Figure 7: Surface Conditions

2.6 Time of Day

Peak Periods of traffic volumes are driving forces for spikes in crashes. **Figure 8** shows two spikes in traffic during a 24-hour period. These are the 7:00-8:00 AM and 3:00-6:00 PM time periods over the five-year period. These time periods match the peak hour time periods within Appendix A of the Initial Data Collection Report for the LSB/LIT Road Network and Resilience Stage 0 Feasibility Study.

Figure 8: Time of Day (All Crashes, 2017 - 2021)

2.7 Highest Crash Intersections

A review of the ten most impacted intersections of the study area account for over 30 percent of the overall crashes. Nine of the 10 intersections are signalized with one intersection having a fatality. Many factors can affect the number of crashes occurring at the signalized and unsignalized intersections. The location and traffic volumes appear to be a primary indicator of higher crashes at signalized intersections.

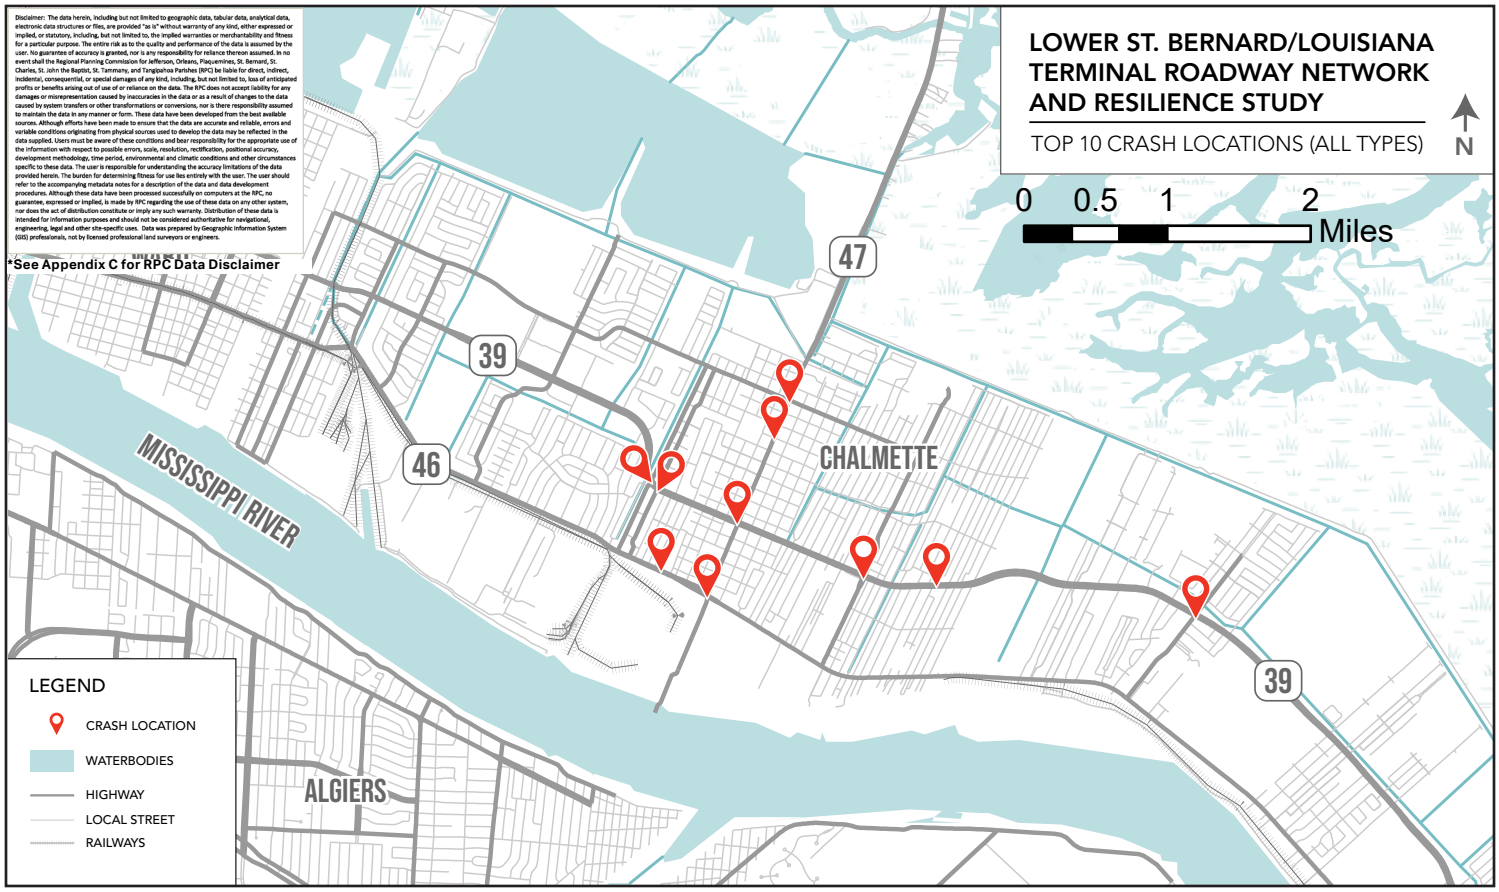

Figure 9 is a listing of the top ten intersections with the highest crash rates within the study area. The limits of crashes were based on a 500-foot radius of the intersection. Crashes could vary within the radius depending on how the crash investigator labeled the crash in the crash report. **Figure 10** are the locations of these

Figure 9: Top Ten Intersections

	Location	# of Crashes	Signal Present	Fatal?
1	Judge Perez Drive (LA 39) at Paris Road (LA 47)	338	Yes	No
2	St. Bernard Highway (LA 46) at Paris Road (LA 47)	150	Yes	No
3	Paris Road (LA 47) at Genie Street	120	Yes	No
4	Judge Perez Drive (LA 39) at Jackson Boulevard	106	Yes	No
5	Paris Road (LA 47) at Solidelle Street	105	Yes	Fatality Left Turn-f, on dry surface, no alcohol
6	Judge Perez Drive (LA39) at Debouchel Blvd	83	Yes	No
7	Judge Perez Drive (LA 39) at Pakenham Drive	79	Yes	No
8	Judge Perez Drive (LA 39) at Palmisano Drive	65	Yes	No
9	Judge Perez Drive (LA 39) at Campagna Drive	64	Yes	No
10	St. Bernard Highway (LA 46) at Lloyds Avenue	47	No	No

This document, and the information contained herein, is prepared for the purpose of identifying, evaluating, and planning safety improvements on public roads, which may be implemented utilizing federal aid highway funds. This information shall not be subject to discovery or admitted into evidence in a Federal or State court pursuant to 23 U.S.C. 407.

Figure 10: Top 10 Crash Locations (All Modes) *Source: LADOTD Crash Data 2017-2021*

3. Pedestrian and Bicycle Safety

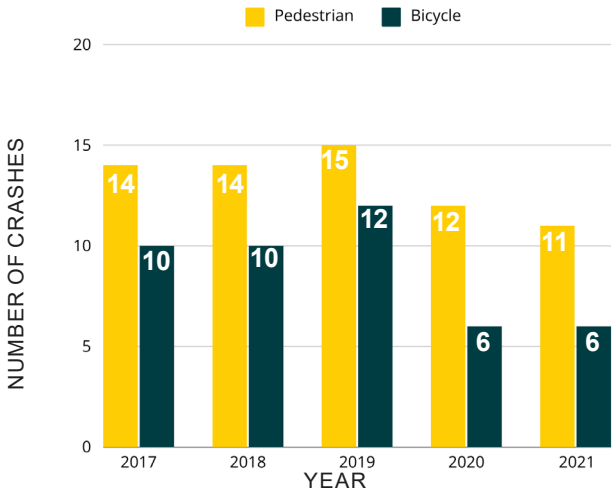

Louisiana is experiencing an increasing rate of bicycle and pedestrian crashes, as demonstrated by several key studies, plans, and programs in this section. Bicycle and pedestrian crash data in St Bernard Parish during the study period also highlights the need for enhanced safety measures and targeted interventions.

Pedestrian and bicycle crashes make up 3% of the overall crashes within the study area. There was a total of 44 of bicycle and 66 pedestrian-involved crashes during the 5-year crash reporting period.

Figure 11 indicates that pedestrian and bicycle crashes have declined slightly over the 5 years. Additional monitoring over the next several years is needed to rule out the implications of shifting transportation patterns as a result of COVID-19 in this trend.

Figure 12 shows the level of severity of Pedestrian and Bicycle crashes within the study area. 6% of the 110 crashes were fatal. A relatively small portion of the crashes involved severe injuries. Most fell in the "moderate" or "complaint" category. A "moderate" injury is classified as a

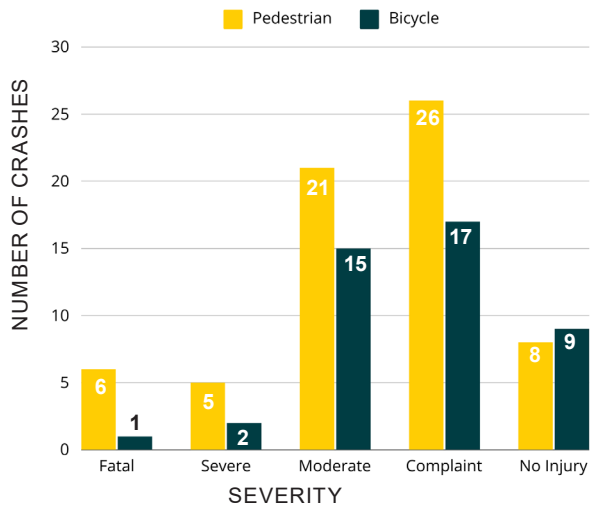

Figure 11: Pedestrian and Bicycle Crash Distribution

nonincapaciting evident injury other than fatal and is evident to observers at the scene of the accident. A "Complaint" injury is an injury reported or claimed which is not a fatal injury, incapacitating injury or non-incapacitating evident

This document, and the information contained herein, is prepared for the purpose of identifying, evaluating, and planning safety improvements on public roads, which may be implemented utilizing federal aid highway funds. This information shall not be subject to discovery or admitted into evidence in a Federal or State court pursuant to 23 U.S.C. 407.

Figure 12: Pedestrian and Bike Crashes by Severity

injury. As indicated previously in Figure 6, 62% of all severe and fatal crashes involve pedestrians and cyclists, far exceeding all other modes of transportation.

Figure 13 below indicates the locations of pedestrian-related crashes within the study area, while **Figure 14** on the next page shows bike-related crashes.

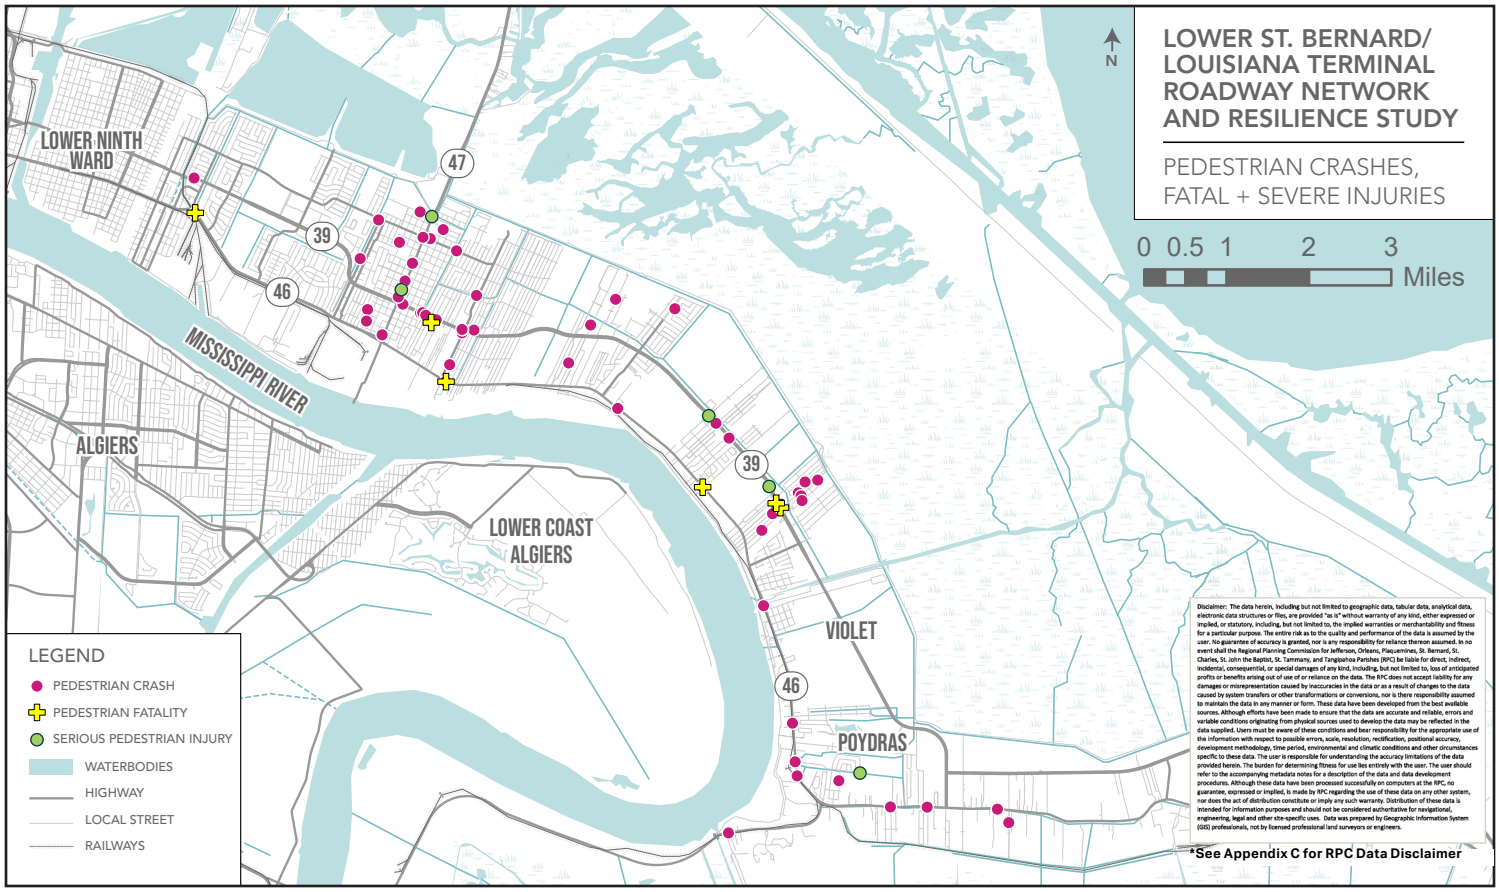

Initiatives to reduce fatalities and serious injuries can guide the parish on best practices focusing on infrastructure improvements, educational campaigns, and enforcement strategies. This section outlines the key plans and programs that underscore the imperative for improved safety for vulnerable users, emphasizing the collaborative efforts required to create a safer transportation environment for all.

3.1 Federal Highway Administration (FHWA) Pedestrian Focus State

Because Louisiana has higher-than-average rates of pedestrian fatalities and serious injuries, it is one of nine states on the FHWA Pedestrian Focus List. This highlights the urgent need for comprehensive and targeted efforts to enhance pedestrian safety. It also brings increased resources, attention, and accountability, all of which are essential for addressing the state's pedestrian safety challenges and improving overall road safety.

This designation also makes Louisiana eligible to receive increased federal attention and support. This can include access to additional funding, technical assistance, and resources to help address pedestrian safety issues. The FHWA may provide guidance on best practices, innovative safety solutions, and help with the implementation of

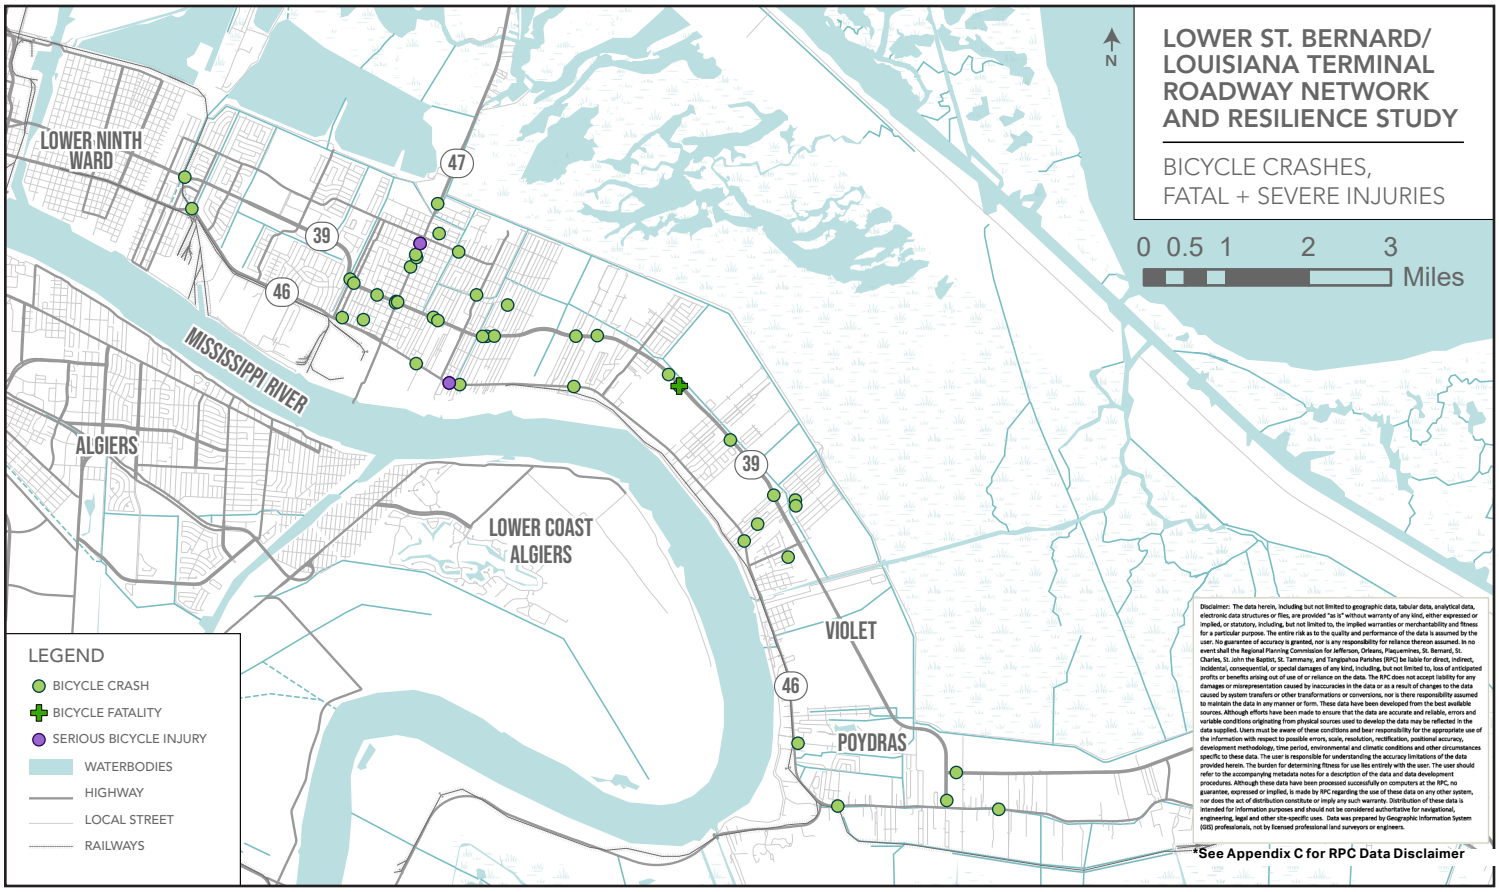

Figure 13: Pedestrian Crashes by Severity *Source: LADOTD Crash Data 2017-2021*

AECOM | GIS

This document, and the information contained herein, is prepared for the purpose of identifying, evaluating, and planning safety improvements on public roads, which may be implemented utilizing federal aid highway funds. This information shall not be subject to discovery or admitted into evidence in a Federal or State court pursuant to 23 U.S.C. 407.

Figure 14: Bike Crashes by Severity *Source: LADOTD Crash Data 2017-2021*

effective safety programs.

The designation may also indicate a need for the development and implementation of focused, data-driven safety strategies. Louisiana will need to identify high-risk areas and conditions contributing to pedestrian crashes and prioritize interventions in these locations. This could involve enhancing crosswalks, improving lighting, adding pedestrian signals, and redesigning streets to be more pedestrian-friendly.

To track the effectiveness of these safety interventions, robust monitoring and evaluation mechanisms are critical. Continuous data collection and analysis will be essential to understand the impact of various measures and to make necessary adjustments to strategies. In addition, Louisiana is required to provide regular reports to the FHWA on its progress in improving pedestrian safety. This ensures accountability and helps maintain momentum in implementing safety initiatives. The state will need to demonstrate how federal support is being used effectively to reduce pedestrian fatalities and injuries.

3.2 Louisiana Strategic Highway Safety Plan

The Louisiana Strategic Highway Safety Plan (SHSP) document details various aspects of traffic safety, focusing on reducing fatalities and serious injuries through targeted strategies. One such strategy is the Destination Zero Deaths initiative, in which Louisiana has committed to aim for zero deaths and injuries on its roadways.

Regarding pedestrian safety, Louisiana reported 15,384 pedestrian crashes over the 10-year period, with 1,119 (7.3%) being fatal crashes. This constitutes a higher pedestrian fatality rate compared to the national average. Other trends include 1) a disproportionate rate of crashes occurring at nighttime (when pedestrian volume is lowest), 2) the majority of crashes happening in urban areas, and 3) a nearly 32% rate of pedestrian fatalities related to alcohol use.

The correlation between age and pedestrian crashes also reveals significant insights. Crashes involving older drivers and pedestrians tend to occur earlier in the day, specifically between noon and 3 PM. This suggests a potential for targeted safety measures during these hours to mitigate the risk associated with older adults.

Conversely, pedestrian crashes involving younger drivers are more likely to happen later at night, between 9 PM and midnight. This highlights the need for different strategies to address the distinct temporal patterns associated with younger drivers.

The state's qualification for the Federal Highway Administration's (FHWA) Older Driver and Pedestrian Special Rule underscores the increasing trend in fatality and serious

This document, and the information contained herein, is prepared for the purpose of identifying, evaluating, and planning safety improvements on public roads, which may be implemented utilizing federal aid highway funds. This information shall not be subject to discovery or admitted into evidence in a Federal or State court pursuant to 23 U.S.C. 407.

injury rates among drivers and pedestrians over 65 years of age. This recognition mandates the inclusion of strategies to address these trends in the SHSP.

To combat these age-related safety issues, the SHSP includes strategies across multiple emphasis areas:

- Intersection Safety: Given the high correlation of pedestrian crashes with intersections, improving intersection safety is a priority.
- Education and Awareness: Increasing statewide education on pedestrian safety, especially targeting different age groups, is crucial.
- Data-Driven Solutions: Enhancing data collection and analysis to better understand and address the unique risks faced by older and younger pedestrians.

Several demographic variables were examined to investigate potential correlations with specific crash types in the study area. These data are represented spatially by Census Block Group in the following maps that overlay fatal and severe bicycle and pedestrian crashes with factors such as age, minority populations, bicycle/pedestrian dependence, and poverty.

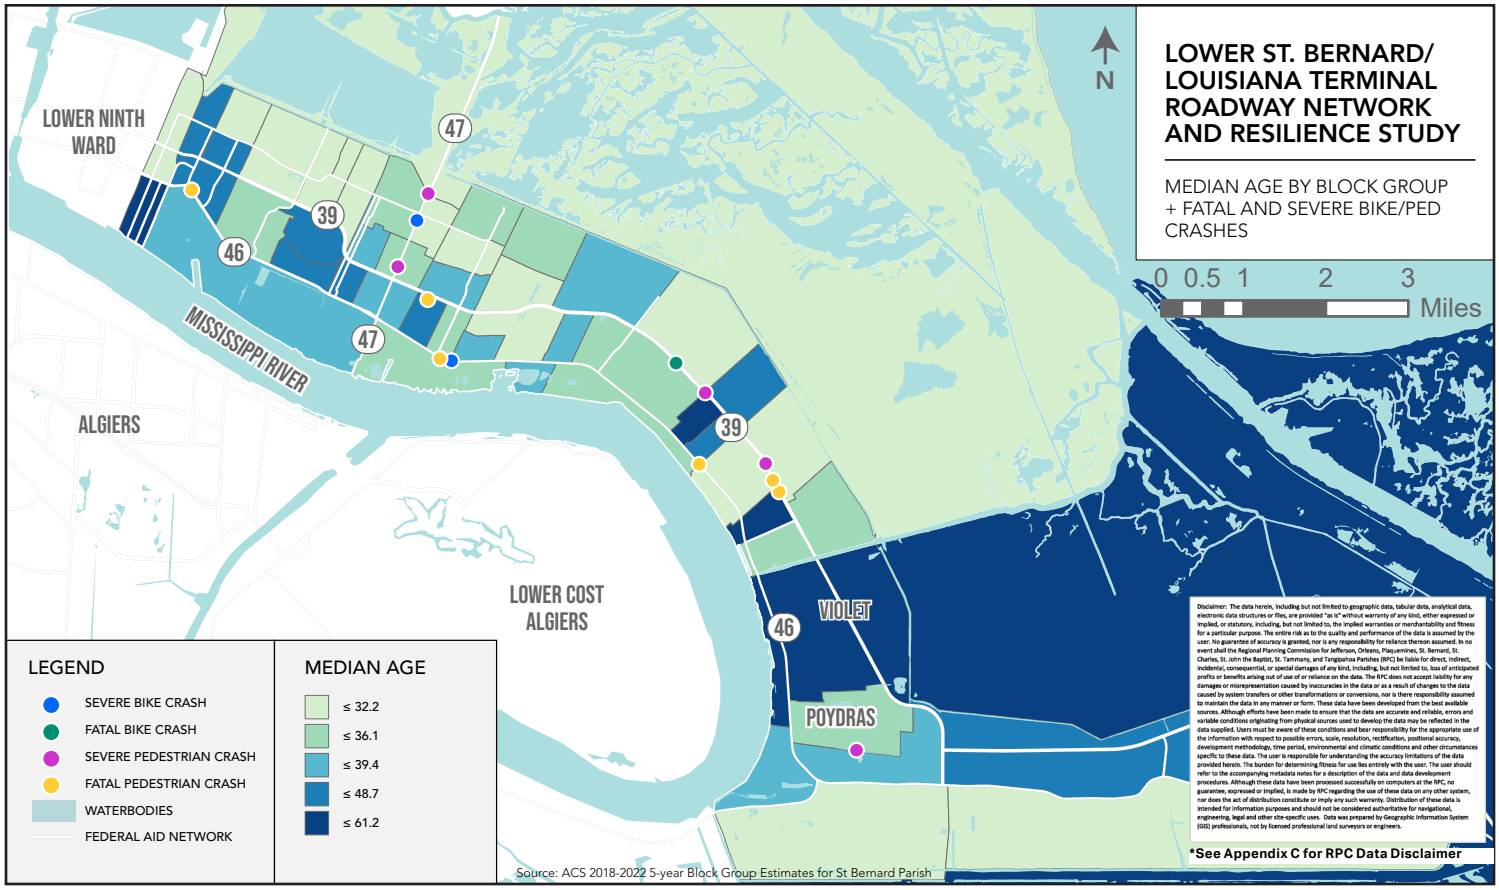

MEDIAN HOUSEHOLD AGE

Given the FHWA Older Driver and Pedestrian Special Rule mentioned above, Median Household Age in the study area was examined. As shown in **Figure 15**, fatal/severe crashes are distributed relatively evenly and no clear correlation between Census Block Groups with older populations and crashes is evident. However, the presence of older individuals living in an area does not necessarily indicate that those individuals were involved in the crash. Further investigation looking at Age of the Driver, Age of the Victim, and Time of Day (given the correlations mentioned previously) may yield more pertinent results. That level of detail requires examination of individual traffic reports, which will be conducted in further traffic analysis in later phases of this project.

MINORITY POPULATIONS

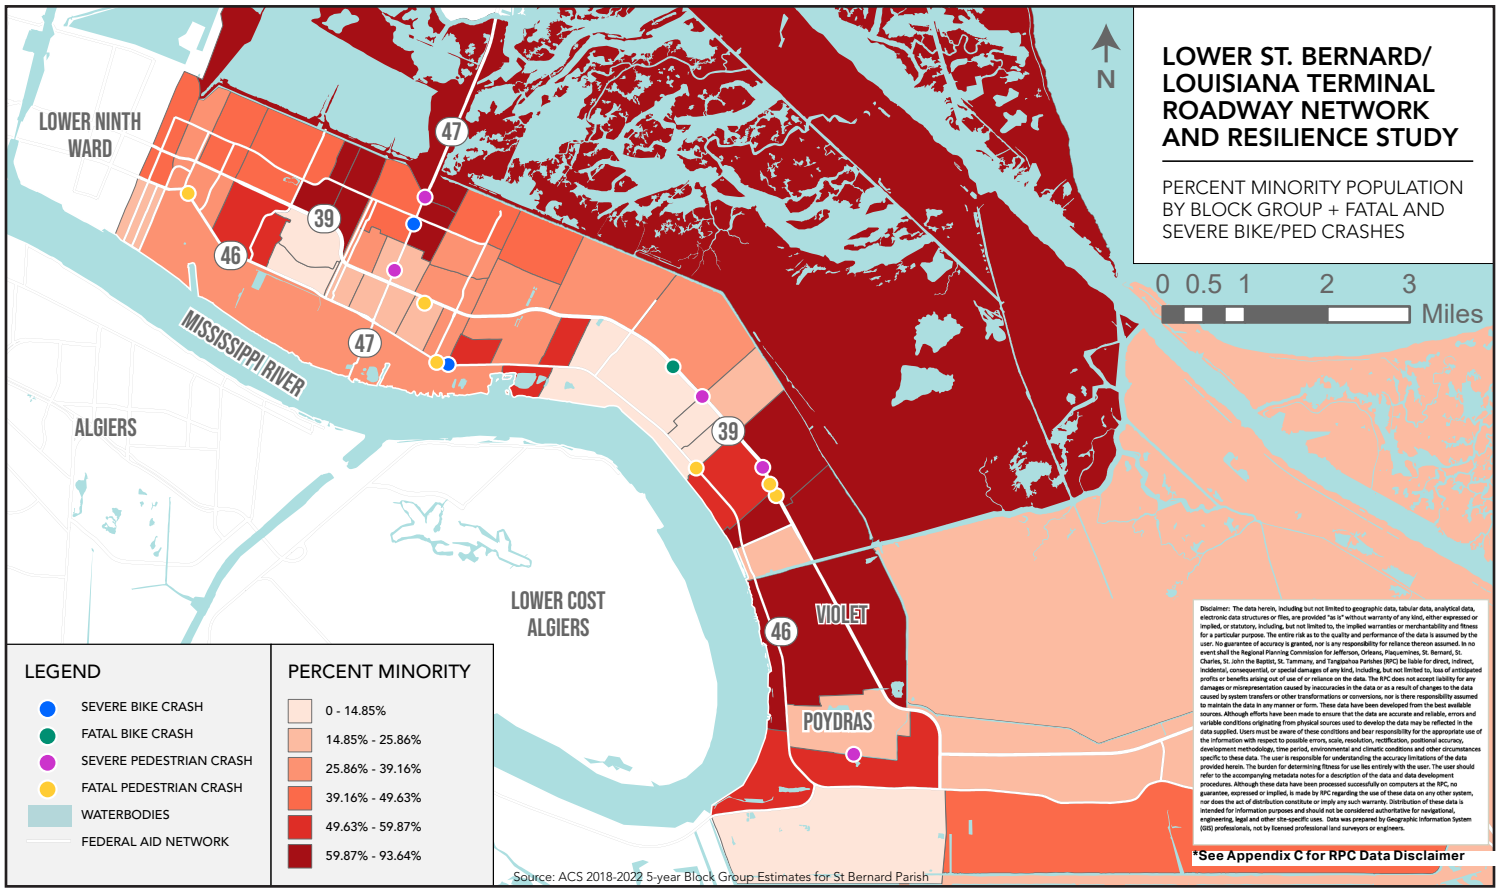

Figure 16 on next page shows the distribution of minority populations by Census Block Group. Four of the crashes are adjacent to areas with the lowest percentages of minority groups (0.00% - 25.86%) and the remaining ten crashes are adjacent to areas with more minority groups (25.86% - 93.63%). Further, a disproportionate 36% of the crashes were adjacent to the highest percent minority Census Block Group (59.87% - 93.63%). This indicates a correlation between crashes and higher concentration of minority groups, which may warrant additional research to understand the specific contributing factors.

Figure 15: Median Age in Study Area + Fatal and Severe Bike/Ped Crashes. *Source: ACS 2018-2022 5-Year Block Group Estimates for St. Bernard Parish*

This document, and the information contained herein, is prepared for the purpose of identifying, evaluating, and planning safety improvements on public roads, which may be implemented utilizing federal aid highway funds. This information shall not be subject to discovery or admitted into evidence in a Federal or State court pursuant to 23 U.S.C. 407.

Figure 16: Percent Minority Population in Study Area + Fatal and Severe Bike/Ped Crashes. *Source: ACS 2018-2022 5-Year Block Group Estimates for St. Bernard Parish*

ZERO CAR HOUSEHOLDS

Figure 17 shows the distribution of zero car households by Census Block Group. The majority of the crashes (64.28%) happened in areas with the highest concentrations of Zero Vehicle Households (7.31% - 28.15%). It is reasonable to expect this correlation, as households without cars are more likely to rely on biking, walking, and public transportation for their daily commutes and errands. This increased exposure to vehicular traffic naturally raises the risk of being involved in crashes. Interventions to mitigate this risk include investment in walking and biking infrastructure, policies that support safer street designs, and the prioritization of the needs of pedestrians and cyclists in these areas.

POVERTY

Figure 18 on the next page shows the distribution of households living below poverty by Census Block Group. A staggering 100% of the crashes happened in areas with the highest concentrations of households below poverty (15.07% - 56.77%). Factors that typically contribute to this correlation include disinvestment in poorer areas and higher risk exposure as mentioned above due to walking/biking dependence. Addressing these issues requires targeted interventions, including improving infrastructure, enhancing education and awareness, and ensuring equitable enforcement of traffic laws.

3.3 St. Bernard Bike and Pedestrian Plan Update 2017

The St. Bernard Parish Bike and Pedestrian Plan Update is a comprehensive strategy aimed at enhancing the safety, accessibility, and connectivity of bicycle and pedestrian infrastructure within St. Bernard Parish, Louisiana.

The plan identifies a 152-mile network of Regional Bikeways that link communities within St. Bernard Parish and neighboring parishes. The Regional Network includes the 14-mile Mississippi River Trail, the 26-mile 40 Arpent Trail, and 15 miles of other regional bikeways.

The plan also includes a local Network comprising 97 miles of on-street bikeways connecting local destinations such as employment sites, shopping areas, schools, transit routes, and parks. Planned bikeways include signed bicycle routes, marked shared lanes, bicycle lanes, neighborhood greenways, shoulder routes, and multi-use trails.

The plan also incorporates the Parish's 2016 Complete Streets Policy, which identifies 47 miles of sidewalks to be installed or improved and 56 specific pedestrian crossing improvement projects.

Several projects from the Plan are on the horizon, including the St. Bernard Pedestrian Improvements project, which is

Figure 17: Percent Zero Car Households in Study Area + Fatal and Severe Bike/Ped Crashes. *Source: ACS 2018-2022 5-Year Block Group Estimates for St. Bernard Parish*

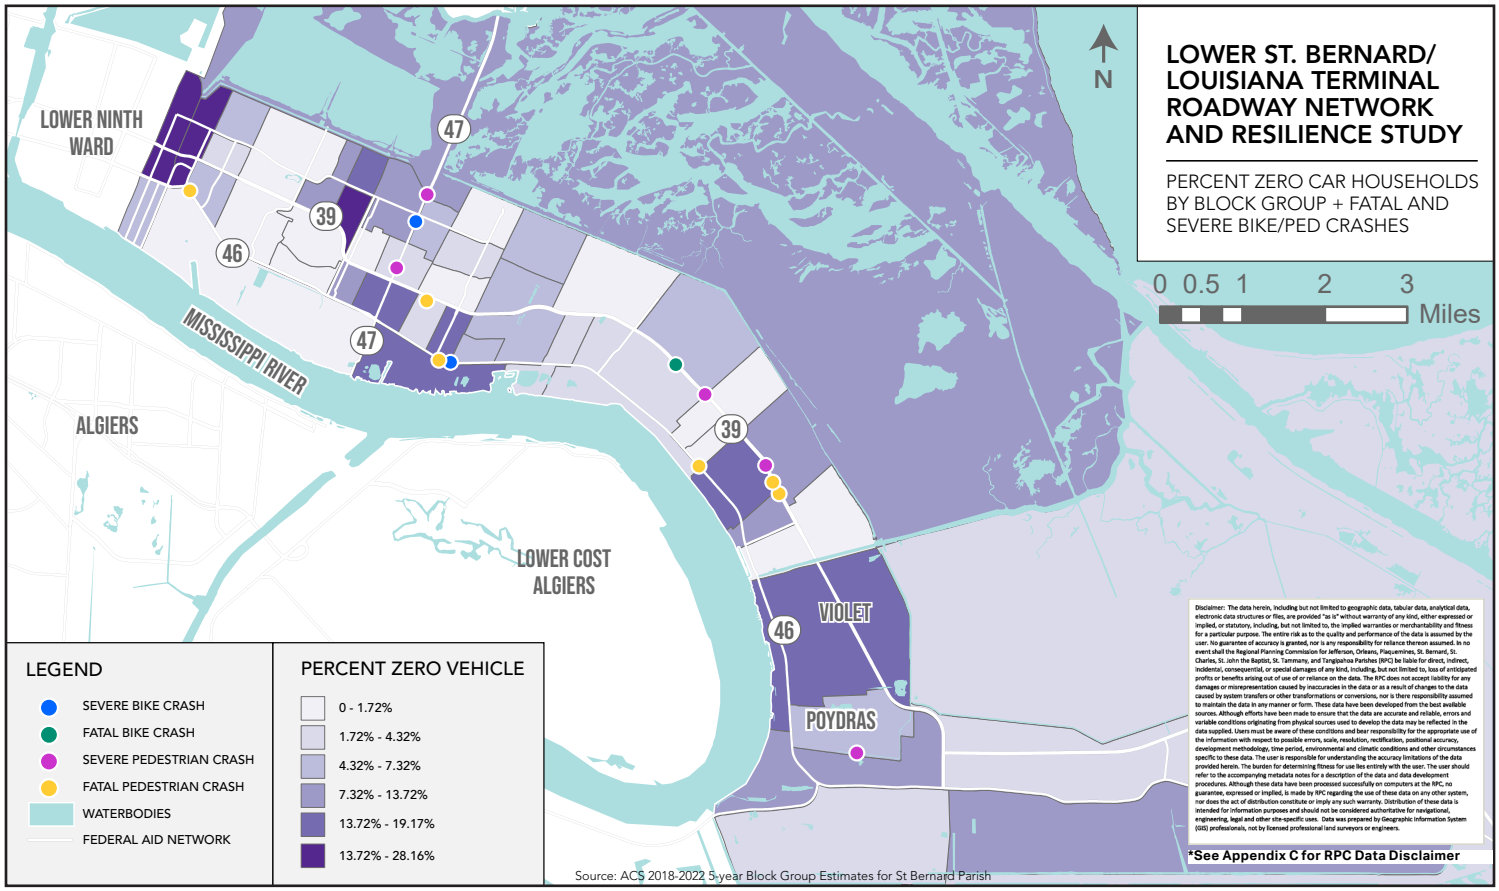

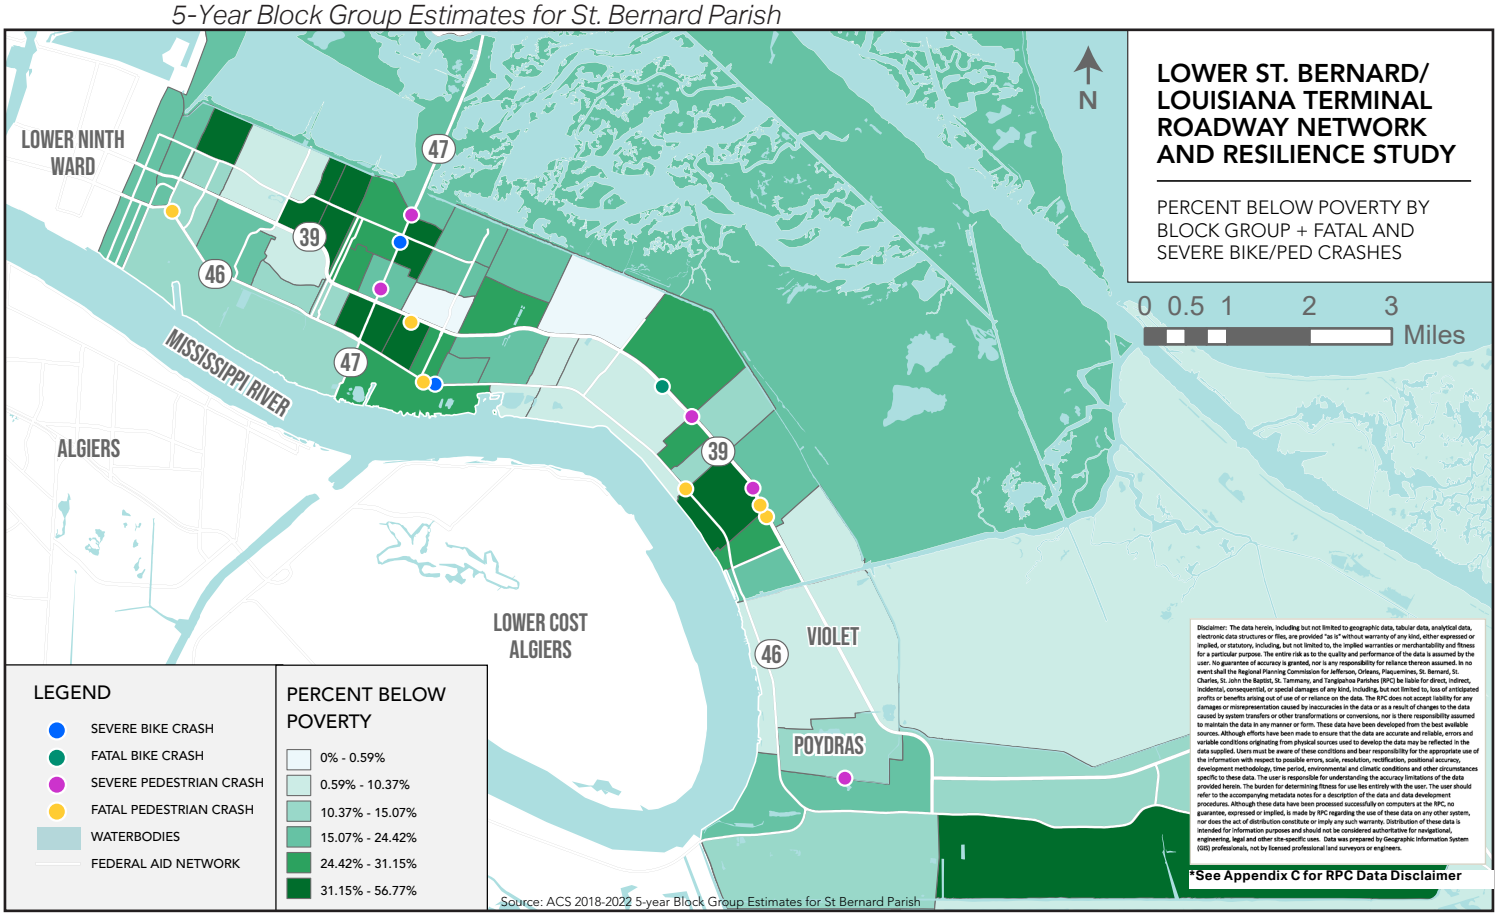

Figure 18: Percent Below Poverty in Study Area + Fatal and Severe Bike/Ped Crashes. *Source: ACS 2018-2022 5-Year Block Group Estimates for St. Bernard Parish*

This document, and the information contained herein, is prepared for the purpose of identifying, evaluating, and planning safety improvements on public roads, which may be implemented utilizing federal aid highway funds. This information shall not be subject to discovery or admitted into evidence in a Federal or State court pursuant to 23 U.S.C. 407.

scheduled to be let in 2024 with construction commencing before the end of the year, according to the Urban Engineer managing the project at DOTD headquarters. The 40 Arpent Trail and a pedestrian bridge over Highway 47 connecting its east and west segments is in the preliminary design phase, with construction expected in the next 2 years.

3.4 Louisiana Pedestrian Crash Study

In July of 2021 The Louisiana State University Center for Analytics and Research in Transportation Safety (CARTS) completed a Louisiana Pedestrian Crash Study for the Louisiana Department of Transportation and Development (LA DOTD). This study was developed to help prioritize the implementation of engineering countermeasures and other projects related to reducing the number of pedestrian crashes throughout Louisiana.

Key points from this study include:

- Pedestrian Crashes and ADT/Population Density: The percentage of pedestrian crashes is greater than the percentage of highway miles across all ranges of ADT and population density per square mile, except for the lowest ranges. This suggests that areas with higher traffic and population density are more prone to pedestrian crashes.
- Significant Over representation: When the population density per square mile is 3,500 or greater, there is a significant over representation of pedestrian crashes. This indicates that densely populated areas are particularly high-risk zones for pedestrians.
- Proximity to Schools or Parks: Pedestrian crashes are also overrepresented on highways within one quarter mile of a school or park. This could be due to the higher pedestrian activity in these areas, particularly involving children and families.

These findings underscore the importance of implementing targeted safety measures in areas where pedestrian crashes are overrepresented. This could include improving pedestrian infrastructure, implementing traffic calming measures, and enhancing safety around schools and parks. It's also crucial to consider these factors when planning new developments or highway projects to ensure pedestrian safety is prioritized.

As the roadway Alternatives for the current study continue to progress, further safety analysis can be conducted utilizing the SPFs that were developed and refined. St Bernard Parish and LA DOTD have been working within the study area to define new safety project for pedestrians. At the time of this study, St. Bernard has plans to develop new sidewalks along LA 39 (E. Judge Perez Drive) between Edgar Drive and Colonial Boulevard—an area that has experienced pedestrian and bicycle related fatalities.

3.5 Highway Safety Improvement Program (HSIP)

The LA DOTD District 02's latest Highway Safety Improvement Program includes LA 39 (Judge Perez Dr) is on the list for high priority roadways. This is approximately a 12 mile stretch of road from Angela Street to Bayou Road.

4. Summary of Findings

Crash data was pulled from Louisiana Department of Transportation and Development's (LADOTD) Crash database. Crashes from 2017 to 2021 were generally reviewed to determine and identify any long-term tendencies in the data. The general review did not include reading individual crash reports, cleansing inconsistencies, verifying locations, or inputting the data into the CATScan tool. The general trends for these crashes were:

- A total of 3,699 number of crashes occurred in the study area between 2017 and 2021. There were 742 crashes identified in 2017, 782 crashes in 2018, 731 crashes in 2019, 681 crashes in 2020, and 763 crashes in 2021. There is no evident trend on yearly crashes reducing, except for the COVID Year, 2020. The Global pandemic impacted normal traffic patterns and as a result traffic volumes were reduced.
- 67% of the crashes occurring along the corridors were Rear-End, Other, and right-turn. The Rear-End and Right-turn crashes are a contributing factor to both driver inattention and over capacity on corridors. Countermeasures can be developed in conjunction with traffic reports on these corridors to help reduce the overall crashes.
- Over 70% of the crashes were Non-Injury crashes.
- Peak times periods for crashes occurred with traditional Volume Peak Periods.
- Of the crashes, 7 of 18 pedestrian crashes were fatal (39%). Three pedestrian fatalities occurred on LA 39.

A more in-depth analysis of both crash data and Existing Traffic Analysis along the corridors of Paris Road (LA 47) to Judge Perez Drive (LA 39) and on Judge Perez Road (LA 39) from Paris Road (LA 47) to the Violet Canal will be required to help further refine alternatives for an interim corridor. The high crash intersections at Paris Rd./ E. Genie St., Paris Rd./ Solidelle St., E. Judge Perez Dr./Paris Rd., E. Judge Perez Dr./Palmisano Dr., E. Judge Perez Dr./Campagna Dr., E. Judge Perez Dr./Debouchel Blvd., Saint Bernard Highway/ Paris Road, E. Judge Perez Dr./Jackson Blvd, E. Judge Perez Drive/Pakenham Dr., Saint Bernard Highway/Lloyds Ave, and fatal and severe crash locations, will require a thorough review of crash reports and traffic analysis to help refine feasible safety countermeasures.

Appendix A

Crash Data

The New Orleans Regional Planning Commission retrieved five years of crash reports from the CRASH1 Data Source for the Study Area. The five-years of crash data comprised of 3,698 crashes, which include vehicle, pedestrian, and bicycle crashes. The crash data was categorized by the crash type, manner of collision, intersection, or segment crash type, and various other conditions. The crash data contained within Appendix A is the latest received from the New Orleans Regional Planning Commission.

This document, and the information contained herein, is prepared for the purpose of identifying, evaluating, and planning safety improvements on public roads, which may be implemented utilizing federal aid highway funds. The entire risk as to the quality and performance of the data is assumed by the user. No guarantee of accuracy is granted, nor is any responsibility for reliance thereon assumed. In no event shall the Regional Planning Commission for Jefferson, Orleans, Plaquemines, St. Bernard, St. Charles, St. John the Baptist, St. Tammany, and Tangipahoa Parishes (RPC) be liable for direct, indirect, incidental, consequential, or special damages of any kind, including, but not limited to, loss of anticipated profits or benefits arising out of use of or reliance on the data. The RPC does not accept liability for any damages or misrepresentation caused by inaccuracies in the data or as a result of changes to the data caused by system transfers or other transformations or conversions, nor is there responsibility assumed to maintain the data in any manner or form. These data have been developed from the best available sources. Although efforts have been made to ensure that the data are accurate and reliable, errors and variable conditions originating from physical sources used to develop the data may be reflected in the data supplied. Users must be aware of these conditions and bear responsibility for the appropriate use of the information with respect to possible errors, scale, resolution, rectification, positional accuracy, development methodology, time period, environmental and climatic conditions and other circumstances specific to these data. The user is responsible for understanding the accuracy limitations of the data provided herein. The burden for determining fitness for use lies entirely with the user. The user should refer to the accompanying metadata notes for a description of the data and data development procedures. Although these data have been processed successfully on computers at the RPC, no guarantee, expressed or implied, is made by RPC regarding the use of these data on any other system, nor does the act of distribution constitute or imply any such warranty. Distribution of these data is intended for information purposes and should not be considered authoritative for navigational, engineering, legal and other site-specific uses. Data was prepared by Geographic Information System (GIS) professionals, not by licensed professional land surveyors or engineers.

This document, and the information contained herein, is prepared for the purpose of identifying, evaluating, and planning safety improvements on public roads, which may be implemented utilizing federal aid highway funds. This information shall not be subject to discovery or admitted into evidence in a Federal or State court pursuant to 23 U.S.C. 407.
